

**In the Specification:**

Please make the following changes in the paragraphs and sections at the indicated page and line numbers in the specification:

Page 4, line 22, to page 5, line 14:

In an especially preferred embodiment the foam formed by foaming the composition according to the invention has strand drawing ~~or forming~~ properties. The subject matter of the invention is an aerosol foam product for hair treatment, comprising a foamable composition containing at least one hair-fixing polymer, at least one propellant and a suitable solvent system. This foamable composition is filled in a pressurized or pressure-resistant container. The foam formed from the foamable composition by dispensing it from the container has strand or web fiber drawing properties. Strand drawing ~~or forming~~ properties are detected as present when a web or strand of fresh foam of a diameter of about 2 mm, preferably less than 1 mm, is formed between two fingers, e.g. the thumb and the index finger, when the foam is taken between the fingers and the fingers are moved apart from each other. Strands or webs of foam can also be detected when the foam is applied to a base, the foam surface is contacted with a finger and the finger is drawn away from the foam. The very good application properties of the foam after working into the hair probably can be ascribed to the web or strand drawing properties and the improved wetting of the hair.

Page 25, lines 4 to 9:

Foam with good strand drawing ~~or forming~~ properties and good compact foam quality is obtained, which breaks up quickly in the hair and is easily worked into the hair. It is characterized by good styling properties, i.e. by an especially good easy hair brushing during dry styling of moist treated hair, pleasant smooth feel of the moist and dry hair, good elasticity, no loading of the hair, beautiful luster and strong fixing.

Page 27, lines 4 to 5:

Foam quality of Foam 1A: very compact, strand drawing ~~forming~~

Foam quality of Foam 1B: little strand drawing ~~forming~~, slimy, greasy

Page 27, lines 13 to 17:

Foam 1C: little strand ~~forming~~ ~~or~~ drawing, poor combability, little elasticity in dry hair, little definition of the hair, weak fixing, otherwise about the same as foam 1A.
